

CALMS AS A QUALITY STRATEGY

C

CULTURE

To release a quality product, Quality is not a final functional check but a continuous state of mind for every task we work on

A

AUTOMATION

Taking care of the Quality of the automation of any process is as important as taking care of the Quality of the functional code

L

LEAN

Focus on continuously improving the Quality of the entire system and not just that of the individual parts to remove bottlenecks and constraints

M

MEASUREMENT

Instead of counting reported issues we can ask about our users' satisfaction to better understand the Quality of our product

S

SHARE

Investing time, both for providing information as well as consuming it, enables us to broaden our perspective and do better work
