CALMS AS A QUALITY STRATEGY

C

CULTURE

To release a quality product, Quality is not a final functional check but a continuous state of mind for every task we work on

A

AUTOMATION

Taking care of the Quality of the automation of any process is as important as taking care of the Quality of the functional code

L

LEAN

Focus on continuously improving the Quality of the entire system and not just that of the individual parts to remove bottlenecks and constraints

MEASUREMENT

Instead of counting reported issues we can ask about our users' satisfaction to better understand the Quality of our product

5

SHARE

Investing time, both for providing information as well as consuming it, enables us to broaden our perspective and do better work
